TASK 1 REPORT

Internship Program — Batch 2026

Submitted By:	Ahmar Hayat
Department:	Web Dev
Submitted To:	Team lead
Date:	June 2026

Introduction

This report presents the work completed for Task 6 of the M-Tech Production & Marketing Web Development Internship Program, Batch 2026.

M-Tech Production & Marketing, based in Haripur, KPK, focuses on making websites not just functional but beautiful. This task is part of Phase 2: Frontend Development (Core) and covers CSS3, which is used for styling and layout of HTML pages.

Objectives

The main objectives of this task were:

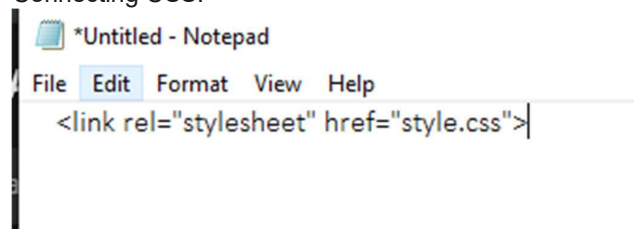

- To understand what CSS3 is and how it styles HTML.
- To learn CSS Selectors, Box Model, Colors, Fonts, and Positioning
- To master CSS Flexbox and CSS Grid for responsive layouts.
- Learning CSS Animations and Transitions.
- To practice CSS on interactive platforms like Flexbox Froggy and CSS Grid Garden.

Work Done

1. Watched Video: "CSS Full Course" by freeCodeCamp.
2. Watched Video: "CSS Crash Course" by Traversy Media.
3. Watched Video: "Flexbox in 15 Minutes" by Web Dev Simplified.
4. Watched Videos: "CSS Grid" and "CSS Animations" by The Net Ninja.
5. Completed 10 levels on Flexbox Froggy and 5 levels on CSS Grid Garden.
6. Styled the index.html from Lab 2.1 using an external style.css file.

Key Learnings

1. What is CSS3: CSS = Cascading Style Sheets. It controls how HTML looks. HTML = Structure, CSS = Design.
2. Connecting CSS:

3. Core CSS Concepts:
 - Selectors: tag, .class, #id

- Box Model: Every element is a box with content + padding + border + margin
 - Colors: hex, rgb, hsl
 - Typography: font-family, font-size, font-weight
4. Flexbox: Used for 1-dimensional layouts - row OR column.
Key properties: display: flex, justify-content, align-items, gap
 5. CSS Grid: Used for 2-dimensional layouts - rows AND columns.
Key properties: display: grid, grid-template-columns, gap
 6. CSS Animations & Transitions:
Transition: Smooth change on hover transition: 0.3s
Animation: keyframes for moving elements Used this to make buttons hover effects.

Conclusion

This lab was the most fun so far because I could finally see my boring HTML turn into a good-looking webpage

The biggest thing I learned is that layout is 80% of CSS. Flexbox and Grid are game changers. Before CSS Grid, people used to hack layouts with floats. Now it's 2 lines of code.
