TASK 5 REPORT

Internship Program — Batch 2026

Submitted By:	Ahmar Hayat
Department:	Web Dev
Submitted To:	Team lead
Date:	June 2026

Introduction

This report presents the work completed for Task 5 of the M-Tech Production & Marketing Web Development Internship Program, Batch 2026.

M-Tech Production & Marketing, based in Haripur, KPK, focuses on building strong frontend foundations. This task is part of Phase 2: Frontend Development (Core) and covers HTML5, which is the structure and skeleton of every website.

Objectives

The main objectives of this task were:

- To understand what HTML5 is and why it is important.
- To learn basic HTML5 tags: headings, paragraphs, lists, links, images.
- To understand Semantic HTML5 tags: header, nav, section, footer.
- To practice HTML using online platforms like freeCodeCamp and Frontend Mentor. To use MDN Web Docs as the official reference for HTML.

Work Done

1. Watched Video: "HTML Full Course" by freeCodeCamp .
2. Watched Video: "HTML5 Crash Course" by Traversy Media.
3. Watched Video: "Semantic HTML" by Web Dev Simplified.
4. Practiced basic tags on freeCodeCamp: h1-h6, p, a, img, ul, ol.
5. Practiced Semantic tags: header, main, section, article, footer.
6. Read MDN HTML Reference to understand attributes like alt, href, src.
7. Created a sample index.html file in VS Code with proper HTML5 boilerplate.

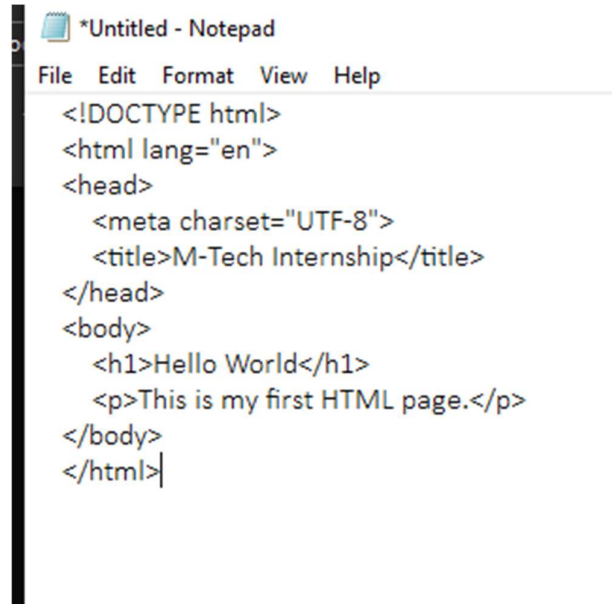

Challenges Faced

Semantic vs Non-Semantic: At first, I used too many div tags. After watching Web Dev Simplified, I learned to use section and nav for better SEO and accessibility.

Image Paths: My img tag was not showing because I used the wrong file path. I fixed it by putting the image in the same folder.

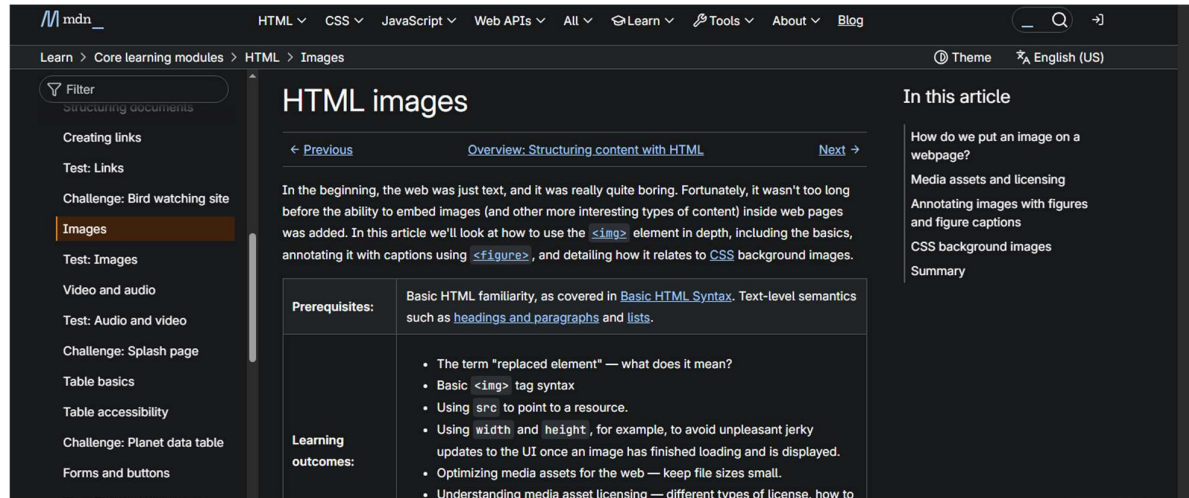

Key Learnings

1. What is HTML5: HTML5 is the latest version of HyperText Markup Language. It gives structure to web pages. Every website starts with HTML.
2. Basic HTML5 Structure:

```
*Untitled - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>M-Tech Internship</title>
</head>
<body>
  <h1>Hello World</h1>
  <p>This is my first HTML page.</p>
</body>
</html>
```

3. Important Tags
:Text: h1-h6, p, strong, em
Links & Media: a href="", img src="" alt=""
Lists: ul, ol, li
Containers: div for styling, span for inline tex
4. Semantic HTML5:
These tags tell the browser what the content means.
 - header - Top of page, logo and nav
 - nav - Navigation links
 - main - Main content
 - section - A section of content
 - footer - Bottom of page
5. MDN Web Docs:
The official documentation. Whenever I forget a tag, I search for "MDN img tag" and get examples instantly.

Conclusion

This lab gave me the foundation for all frontend development. HTML is like the skeleton of a website. Without proper HTML, CSS and JavaScript cannot work well.

The biggest takeaway for me was Semantic HTML. Before this I would just use div for everything. Now I know that using header, nav, and sections makes the code cleaner and more professional. This is what companies like M-Tech expect.
