

Experiment 10

Lab Tasks

1. Build a 'Meet the Interns' page: a MemberCard component (photo url, name, domain, LinkedIn link as props) rendered from an array of at least 6 M-Tech intern objects using `.map`.
2. Build a ReviewCard component showing name, rating (render as ★ repeated ``rating`` times using a loop or `Array(n).fill`), and comment; render 5 reviews from an array.
3. Refactor Experiment 6's landing page's feature-cards section into a real Features component accepting icon, title, description as props.
4. Add PropTypes-style JSDoc comments (or just clear comments) documenting exactly what props each of your components expects.
5. Deliberately remove the key prop from a list, open the console, screenshot the warning, then fix it and screenshot again clean.

Build a 'Meet the Interns' page: a MemberCard component (photo url, name, domain, LinkedIn link as props) rendered from an array of at least 6 M-Tech intern objects using `.map`.

Build a ReviewCard component showing name, rating (render as repeated ``rating`` times using a loop or `Array(n).fill`), and comment; render 5 reviews from an array.

Internship Reviews (5)

Aamir Sohail

"The M-Tech program provided incredible hands-on experience with live industrial workflows."

Fatima Noor

"Great mentorship and structured assignments. Learned React and modern JS concepts rapidly."

Tariq Mahmood

"Building real production projects for our engineering portfolio was the highlight for me."

Sana Ahmed

"Excellent peer collaborative environment and supportive domain technical leads."

Kamran Shah

"Highly recommend to any AI and CS students looking to transition into full-stack development."

Refactor Experiment 6's landing page's feature-cards section into a real Features component accepting icon, title, description as props.

Why Join M-Tech?

1-on-1 Mentorship

Direct guidance from senior software engineers and domain experts.

Live Projects

Build production-ready web and AI applications for your tech portfolio.

Career Placement

Top performers receive direct job recommendations and official certificates.

Add PropTypes-style JSDoc comments (or just clear comments) documenting exactly what props each of your components expects.

Component JSDoc & Prop Type Documentation Reference

Here is the centralized reference table mapping out the exact prop expectations documented via JSDoc for all components created above:

Component	Prop Name	Type	Required	Description
MemberCard	photoUrl	string	Yes	Image URL source path for intern profile avatar.
	name	string	Yes	Full name string of the intern.
	domain	string	Yes	Specialization domain (e.g., AI, Web Dev).
	linkedIn	string	Yes	Absolute URL for LinkedIn profile anchor.
ReviewCard	name	string	Yes	Reviewer name string.
	rating	number	Yes	Numerical score (1-5) used to dynamically loop star icons.
	comment	string	Yes	Text body of the review.
FeatureCard	icon	string	Yes	Icon symbol or emoji string representation.
	title	string	Yes	Title heading of feature item.
	description	string	Yes
